

Hi Gina and Nathan,

Good to see you both today.

As promised, please find attached Colne Town Council's security assessment, along with indicative pricing for the following security services:

- **Managed Huntress EDR** - Provides advanced endpoint protection by detecting, investigating, and responding to malware, ransomware, and other malicious activity on managed devices.
- **Managed Huntress ITDR** - Protects Microsoft 365 identities from account compromise, unauthorised access, and credential-based attacks. Provides continuous monitoring and rapid response to suspicious activity.
- **Managed Huntress SAT** - Delivers ongoing security awareness training and phishing simulations to help users identify cyber threats, reduce risk, and strengthen the organisation's security culture.
- **Managed Huntress SIEM** - A fully managed security monitoring service that collects and analyses logs from connected systems, applications, and cloud services.
- **Managed Dark Web Monitoring** - Continuously monitors the dark web for compromised company credentials and data breaches, providing early warning of potential security risks so action can be taken before accounts are exploited.

Once you have had the opportunity to discuss these recommendations with the Council, please let me know your thoughts. We can then put together a final proposal tailored to your requirements.

Regards

James
